

LGH-RVXT3-E

Commercial Series

The Commercial Lossnay (LGH) Mechanical Ventilation Heat Recovery (MVHR) systems are designed to supply clean, fresh air into commercial buildings, whilst simultaneously extracting stale air.

The **RVXT3** units offer a significantly reduced height whilst maintaining a large airflow, allowing easy installation in ceiling voids.

Key Features & Benefits:

- Mitsubishi Electric pioneered heat exchanger enables maximised latent heat exchange, resulting in cost and carbon savings
- Low unit height (500mm) and lightweight structure, ideal for ceiling installation
- Four commissionable fan speeds, settable between 25-100%, with independent supply and return fan control offering low running costs and easier compliance to Part L
- Optional Mitsubishi Electric energy saving CO₂ sensors allow automatic incremental fan control for a healthy indoor environment; sensors powered by Lossnay unit
- No condensate drain required allowing for easy design and installation
- Dual-barrier coated fans, prevents dust and grease accumulation, ensuring long-term efficient fan operation
- Constant pressure control available with 0-10V pressure transducer (field supplied), for variable airflow requirements across multiple zones
- Compatible with Mr Slim and City Multi air conditioning systems for a complete and highly effective system operation
- Duct handing selectable via dipswitch, for easy and flexible installation
- Optional high efficiency filters available

HEAT EXCHANGER		Paper with Specially Treated Cellulose Membrane			
STANDARD FILTER		ISO 16890 Coarse 60% ¹			

Notes: Running current, power consumption, recovery efficiency, and sound levels are based on the above default airflow rates at 25%, 50%, 75%, and 100%. Specific duty point data is available upon request. Supply and exhaust fan speeds can be individually commissioned between 25% and 100% in 5% increments. Sound Pressure Level measured at 1.5m under the centre of the bottom panel. Air flow rates, external static pressure and specific fan powers tested to BS EN13053: 2019. Energy recovery efficiencies tested to BS EN308: 2022.

¹: EN 779 G4 equivalent according to 'REHVA Filter Class Conversion between EN 779 and EN ISO 16890-1'

²: 3 phase 4 wire power must be connected. The unit only uses loads L2 and L3, meaning L1 does not draw load
